Bhoj Wetland

The Bhoj Wetland, a sprawling ecosystem of 31 sq kms has rich biodiversity. It provides an ideal habitat for numerous Resident and Migratory birds, Macrophytes, Phytoplankton and large number of fish species. Insects, Reptiles and Amphibians also enrich the biodiversity of Bhoj Wetland.

This wetland is a unique waterbody comprising of two contiguous man made reservoir- The upper lake and lower lake. The upper lake was created by Raja Bhoj in 11th Century A.D. by constructing an earthen embarkment across 'Kolans' river while the 'Lower Lake' was constructed nearly 200 years ago in close vicinity of the upper lake. This large swathe of fresh water ecosystem was designated as a 'Ramsar Site' in the year 2002 to conserve it and create awareness about wetland biodiversity.

Bhopal Birds Conservation Society

A organisation committed to conserve biodiversity and spearhead the efforts by bringing all stakeholders together. Bhopal Birds Conservation Society is an organization of dedicated, enthusiastic and committed researchers, conservationist and volunteers working to bring awareness among adjoining villagers, students and citizens about wetlands biodiversity.

The modus operandi of conservation involves outreach initiatives like Gram Sabha, Bird Watching and Nature Camps, Scientific Surveys and Digital Documentation creating a rich database which may contribute in designing conservation strategies for wetlands and biodiversity hotspots.

About Calendar

The calendar is designed to share the findings and learnings achieved after "1st Butterfly Survey of Bhoj Wetland with Citizen Science Initiative" supported by Madhya Pradesh State Biodiversity Board.
